WELCOME TO THE NORDIC BUILDING FORUM 2002 IN COPENHAGEN

The Nordic Building Forum has 75 years anniversary in year 2002

This event will be celebrated by the Danish section of the Nordic Building Forum and we have therefore the pleasure of inviting you to participate in the conference:

"THE NEW REALITY OF THE BUILDING INDUSTRY"

1-3 September 2002 in Copenhagen on the congress hotel, Radisson SAS Scandinavi Hotel.

In the Nordic countries as well as globally great changes are on its way in the process of the building industry.

Higher quality and higher productivity are the demands from the consumers. The building industry has to deliver more value for money.

The clients will lead and give inspiration to the demand for a new culture in the building industry, with an efficiently co-ordinated value chain in the production, where efficient management and IT tools in the processes will ensure quality and high productivity. All parties in the building industry must be open and ready for innovation and structural changes and develop new crosssectorial cooperations in the building processes.

The target groups of the conference are public authorities, clients, consultants, contractors, builders and producers/suppliers, or in other terms all the parties in the building industry supply chain.

The new processes and cooperations create teamworks with new needs for communication, information and transparency. IT tools are an important player for these purposes.

Copenhagen is the focal point of the Øresundregion, with 3 million inhabitants linked together by a common history and by the challenges in the future of integrating the inhabitants in this two-nation region. A great new infrastructure has been provided and a network of networks between industries, science and research institutions and cultural institutions has been developed.

The business activity level in Copenhagen is very high, not at least in the building industry, where a number of large scale business-, cultural- and housing projects gives evidence of the importance of the Øresundregion.

A number of visits to companies and buildingsites provides the participants with the possibility to study this development at close range and participate in the debate of the new reality of the building industry.

The programme includes a number of social events. The participants will be welcomed in the city center Sunday and an exciting "Innovation night" in Tivoli will take place Monday.

This conference will provide excellent possibilities to create business contacts in the Nordic building industries.

Further to the Nordic participants, there will be a number of participants from the eastern part of the Baltic area, why simultaneous translation into English will be provided.

Welcome to Copenhagen in September 2002
